

## Advantage of Using RMCS

### *Hardware*

- Real time monitoring and control of equipment located at remote sites
- Standalone operation – system works independently even when the link with the central command is lost
- Not dependable on proprietary protocols
- Highly scalable
- Can be programmed to automatically perform tasks with other building systems
- Full direct connectivity for all types of building systems (including proprietary systems)

### *Software*

- Modular program structure
- Powerful software that allows operator to create their own GUI with simple drag and drop features
- User friendly software that builds applications without the need of in depth knowledge of industrial programming languages
- Design and build display applications quickly using pre-designed templates and standardized plant mimic
- Allows import of floor plans, maps, pictures etc
- Extended capabilities with 'plug-Ins' and bespoke applications
- Deliver building system information to thin client applications from dedicated servers
